

## Product Family Type 4 - liquid-tight protection (spray)

Single use protective suit designed to protect against particles contamination and chemical contamination.

### New names, same products!

In order to stay compliant with the European standards, Honeywell had to recertify 4 products of the single-use protective clothing range. For this reason, names and references had to be modified, but products remain the same, as well as the price!

See modifications in the following PDF file:

We also took the opportunity to improve our chest label by adding protection level.
