

Conforming to eyewash ANSI standard could not be easier

Primary, portable, self-contained eyewash stations are the most efficient way to ANSI compliance. Stations with replaceable eyewash cartridges are the easiest to maintain and offer the most versatility.

- Save **time** by using a ready-to-use solution
- Save **resources** by reducing station inspections
- Save **money** by replacing cartridges only every 2-years*

Secondary eyewash devices, although not subject to ANSI conformity, prove to be an essential supplement to protect employees' eyesight.

They can be placed much closer to the risk area and can be used during transport of injured employees, while the eyes need continuous irrigation.

Take advantage of this promotion and reinforce your employees' protection.

Purchase a Pure Flow 1000 or Fendall 2000 eyewash station, from September 6th to November 27th and you can receive **four FREE Eyesaline eyewash bottles** with universal stands per station purchased.

Free offer is valid for end-users only, cannot exceed 100 units and must be claimed online by 12/31/2017.
