

Creating a culture of safety starts with training

Honeywell Safety Products

Honeywell Safety Products (HSP), a division of industry giant Honeywell, was established to provide the broadest range of safety solutions for hazardous environments. And to HSP, that starts with a foundation of training.

“Honeywell Safety Products integrates multiple disciplines to provide the best solutions for our customers,” said Ravi Ramanathan, Americas general manager, Safety at Heights. “For more than five decades, our expertise in Miller brand fall protection and safety training has been a staple in the industry and has made us the right choice for companies and employees seeking safe work environments.”

HSP is strengthening its safety training solutions by adding a Houston Training Center and Customer Experience Center to offer local training convenient to the downstream industry. This is in addition to the company’s existing training facilities in the United States and Canada, complemented by HSP’s custom, on-site training.

HSP’s free Howard Leight HearForever® seminars will be held in Texas and Oklahoma in September.

Instructors incorporate years of industry experience to provide skill-based training through live demonstrations, hands-on training and classroom discussions. Participants receive two-year certificates upon successful completion of courses. Courses offered include confined space, lockout/tagout and competent person.

A variety of seminars and courses are offered through HSP’s different brands. The *free* Howard Leight HearForever®: Best Practices in Effective Hearing Conservation seminars, for example, help safety professionals improve their hearing conservation programs and prevent noise-induced hearing loss (NIHL). Topics include basics of NIHL, key elements of an effective hearing conservation program, impending changes to the Noise Reduction Rating and how it impacts your program, and more. These seminars will come to Texas and Oklahoma in September and attendees will receive continuing professional education credit.

Training is just one component of a safety solutions program HSP can customize for you. Through the company’s assessment services, the team leverages a network of certified safety professionals to perform comprehensive site and hazard assessments to help end users comply with federal, state

and local regulations.

Recently, for example, HSP performed assessment of a large Houston area refinery. The team provided a comprehensive report that detailed regulatory needs and outlined hazards, product and training needs, helping them to achieve compli-

ance with regulations.

With a broad portfolio of solutions for safety products and services to meet ever-changing needs, HSP stands ready to assist you in building a culture of safety in your workplace.
